SUMMARY

- Computer Science Master's student specializes in Computer Graphics and Physics-based Simulation.
- Skilled in Ray Tracing, Geometric Processing, Computer Vision, Machine Learning, and Web Development.
- Research experience in High-Performance Computing and Computer-Aided Design.
- Strong background in both hardware and software.

EDUCATION

Georgia Institute of Technology

Master of Science in Computer Science

Atlanta, GA, USA

Expected May 2025

- Overall GPA: **3.71/4.0**

National Taiwan University

Bachelor of Science in Electrical Engineering

Taipei, Taiwan

Jun 2022

- Overall GPA: **4.14/4.30 (TOP 10 %)**

- Awards: **2021 Scholarship of Pan Wen-Yuan Foundation, NTU Dean's List Award**

WORK EXPERIENCE

Teaching Assistant

Taipei, Taiwan

Cornerstone EECS Design and Implementation Course | National Taiwan University

Mar - Jun, 2021, 2022

- Created assignments regarding graph searching in Python and signal processing through Arduino.
- Developed the online grading platform written in Python and JavaScript.
- Led four teams to achieve full score on the designated project, breaking the all-time course record.

RESEARCH EXPERIENCE

In-Memory Computing on Genome Sequencing

Taipei, Taiwan

Academia Sinica | Advisor: **Hsiang-Yun Cheng**

Jul 2021 - Mar 2023

- Implemented the high-performance Compute-In-Memory simulator for genome sequencing.
- Achieved 40 times faster than the latest in-memory computing genome sequencing tool.

Functional Engineering Change Order with Behavioral Change Guidance

Taipei, Taiwan

National Taiwan University | Advisor: **Iris Hui-Ru Jiang**

Mar 2021 - Sep 2021

- Utilized the Computer-Aided Design to generate patches converting existing circuits to match new specifications.
- Completed the task that convert a circuit with thousands of gates to a new one in less than 5 seconds.
- Led a team of three novices to win an **Honorable Mention** in 2021 CAD Contest @ ICCAD.

PROJECTS

Fluid Manipulation via Hand Motions

Feb 2024 - Apr 2024

- Detected and identified hand gestures by Computer Vision techniques and machine learning methods.
- Incorporated the gesture detector and fluid simulator so that users can control the virtual fluid by their hands.
- Achieved 98% accuracy in gesture detection and real-time simulation with inference time 3.51 ms in average, which is 12 times faster than the existing tool MediaPipe.

Disaster Tweets Detection

Oct 2023 - Dec 2023

- Designed a machine learning model to detect the twitter posts which are related to disasters.
- Utilized **Embedding and Vectorizing** models to enhance the language processing.
- Achieved higher than 80% in both precision and recall on a dataset of 1000 tweets.

Data Visualization of Maternal Mortality Rate in the US

Oct 2023 - Dec 2023

- Created the visualization report of the Maternal Mortality Rate (MMR) data in the US by Tableau.
- Engineered a Python program capable of parsing data from PDF documents, transforming it into a structured Excel table optimized for visualization purposes.
- Conducted geographical and temporal analysis, providing insights into the trends and patterns of MMR across different states and over time.

SKILLS

Programming

Python, C++, RISC-V, Verilog, MATLAB, Arduino, STM32, HTML/CSS, Java, JavaScript, LaTeX

Expertise

Computer Graphics, Machine Learning, Computer Vision, Physics-based Simulation, Database, Data Visualization, Computer-Aided Design, Computer Architecture, High-Performance Computing

Language

English(fluent), Mandarin Chinese(native), German(intermediate), Japanese(intermediate)

Leisure Activity

Philosophy Thinking, Badminton, Marathon, Frisbee
